

# The Rosie Extension

## Project Newsletter – November 2011

### Construction Update

Construction is progressing well and the project remains on track to complete at the end of June 2012.

Photovoltaic (solar) panels have been installed on the existing Rosie roof (please see photo below). The panels will create 10% of the electricity required to power the new extension. The steel frame for the plant room on the roof of the extension has been built, and over the coming weeks some of the large pieces of equipment will be lifted into place.

Inside the building excellent progress is being made! All of the internal partition walls are now in place, and the installation of mechanical and electrical services is very well advanced. External windows and doors are being fitted on all levels, and the high level link between the existing Delivery Unit and level 3 of the extension has been built.

### Farrans Embrace the Spirit of 'Movember'

'Movember' is responsible for the sprouting of moustaches on thousands of men's faces in the UK and around the world, to raise funds & awareness for men's health, specifically prostate & testicular cancer.

Well done to the Farrans Healthcare Team for growing and grooming their moustaches to raise money for the Rosie Hospital Campaign and for 'Movember's' men's health partner – The Prostate Cancer Charity.
